

Miscellaneous

Rust & Corrosion Preventative Dressing

Marine

- Anchor Chains
- Rigging
- Boat davits
- Ballast Tanks
- Hatch dogs
- Chain lockers
- Shaft Alleys
- Pumps, etc.

Logging

- Standing rigging
- Running lines
- Tools
- Machinery, etc.

Industrial

- Hand tools
- Parts in storage
- Machinery
- Inaccessible areas
- Pipes
- Tanks, etc.

NOTE: Composed of petroleum oils and wool wax to combat corrosion, metal wetting, and water displacement. Surface preparation is minimal. Applied in single coat and requiring no curing time. The high flash point minimizes fire hazard. Available in liquid, aerosol, and gel formats. Contact us for recommendations in solving your corrosion problems.

Marking Paints

LUMBER & PLYWOOD MARKING

Rudd Lumber & Plywood Marking aerosols provide a quick, easy way to *color code rough or finished lumber* prior to distribution or warehousing.

Formulated with premium quality *alkyd resins*--Rudd Lumber & Plywood Marking gives *durable, weather resistance* with excellent color retention on soft or hard woods.

You can use this *fast dry* enamel with confidence for short or long term marking requirements.

Like all Rudd aerosols, our Lumber & Plywood Marking is designed to provide *trouble-free spraying and complete exhaustion* of each can. No hassle--no waste! And our special spray button produces a high delivery rate for fast and efficient lettering, numbering spotting or stenciling.

HI-VIS FLOURESCENT MARKING

When you require the ultimate in *super high visibility*, Rudd Hi-Vis Fluorescent Marking aerosols give the results you need.

We manufacture *six vibrant fluorescent colors* designed for short term marking of trees, logs or lumber. With Hi-Vis you'll create a *strong visual impact* and attract attention at *greater distances*.

The "new improved" *cold weather formula* promotes trouble free spraying during winter months. And our *high solids* content give you *more paint*, for more marks, in every can. Rudd Hi-Vis is packaged with a high delivery rate spray button so you can mark fast and efficiently - from the first to the last spray.

Note: Fluorescent pigments are inherently susceptible to fading. For long term marking where superior weathering characteristics and color retention are required, use Rudd Tree & Log Marking, Rudd Hydra Bond or Rudd Lumber & Plywood Marking paints.
